

Watchberry GPS Tracking for Transportation Sector

KEY FEATURES:

- Your controller, through our intelligent software, can **pinpoint** all your drivers on **one map**.
- Minimise **Customer Minutes Lost** by visually showing which driver is closest to the next call. Improve response time.
- The data can be used to monitor the time each driver spends both on-site and travelling between sites.
- You are able to download reports & use for **cost accounting** purposes in timed modules (for example in 15 minute intervals).
- Helps to meet **Health & Safety** requirements for **lone workers** & **zero harm initiatives**.
- Prevents company vehicles being driven for private use.
- Follows the driver not the vehicle. No need to phone to find out where drivers are (you already know via the web interface).
- Fully hosted secure tracking service (or, host your own service packages available).
- Integrates with your existing back office systems through web service interface.
- **Low investment cost** – less than £2 per week per device/driver and uses your existing Blackberry, Android or iPhone.
